Caleydo is an intuitive application for visualization of biomolecular datasets. It enables you to go beyond mere correlations and to identify interdependencies between datasets for you to gain insights into the clinical profiles of individuals. The utility of data visualization has been highlighted to identify the properties of gene networks, protein-protein interactions, and the pathways using which these biomolecules perform their functions. The application is ideal for scientists and clinicians who are involved in studies of the genome, proteome, and metabolome. The concept behind the application is to create a system that allows a user to select data sets as well as their desired parameters for analysis. The utility allows the user to define the characteristics of the research or study from a defined list. The features include:

- Generates graphics maps for data sets which were visualized in tools like Cytoscape and Gephi.
- Utilizes the visualization facilities of the tool to see relationships in data set even if they are derived from various sources.
- Utilizes the features of the query wizard to quickly determine interdependencies from multiple data sets.
- Checks the validity of the dataset before generating a graph and analyzes it for interdependencies.
- Saves the result to a file to be used later for further analysis.
- The library and the settings for the application are saved, so that they can be used for further analysis and the use of the results to examine the dataset.
- Generates the text file formats like CSV, comma separated values, and GFF.
- Can easily visualize the graph from various datasets.
- Can easily publish the graph created using the application.
- The application is available as both a stand alone software as well as an online service.
- The Caleydo app is based on the Caleydo web service which allows a user to analyze large datasets of biomolecules such as, genomics, proteomics, metabolomics, and microbiomics.

Features of Caleydo: The app is a standalone standalone app, meaning that you do not need to download it. The data that you upload is stored in the cloud and can be accessed from any web browser. You can either use one of the data sets stored or you can upload your own datasets. When data sets are not stored locally, Caleydo acts as a web service. The application enables you to perform various different types of analyses.
